

# Comgy EED Solution

Initiating Your Way Into The Digital Billing Future

## Topic: EED

### New obligations are coming your way

The Energy Efficiency Directive (EED) pursues the objective of increasing energy efficiency in buildings. To this end, monthly consumption information for tenants and the installation of remotely readable and interoperable metering technology will become mandatory. We support you in planning, implementation and management!

## EED Requirements (according to current status)

01/01/2022	With the effective date of the new law, only the installation of remotely readable & interoperable meters is permitted
From 01/01/2023	Installation only of remotely readable meters that can be connected to Smart-Meter-Gateway connectable & interoperable metering devices
Until 01/01/2027	Existing properties must be equipped with remotely readable & interoperable meters
Until 12/31/2031	Existing properties must be equipped with remotely readable, Smart-Meter-Gateway connectable and interoperable measuring devices

**From 01/01/2022, owners are obliged to provide tenants in remotely readable properties with monthly consumption information.**

## Challenges

### Process & Capacity

The EED requirements call for new infrastructure, processes, and expertise in technology, billing and administration. These items require additional personnel capacities and a holistic EED strategy.

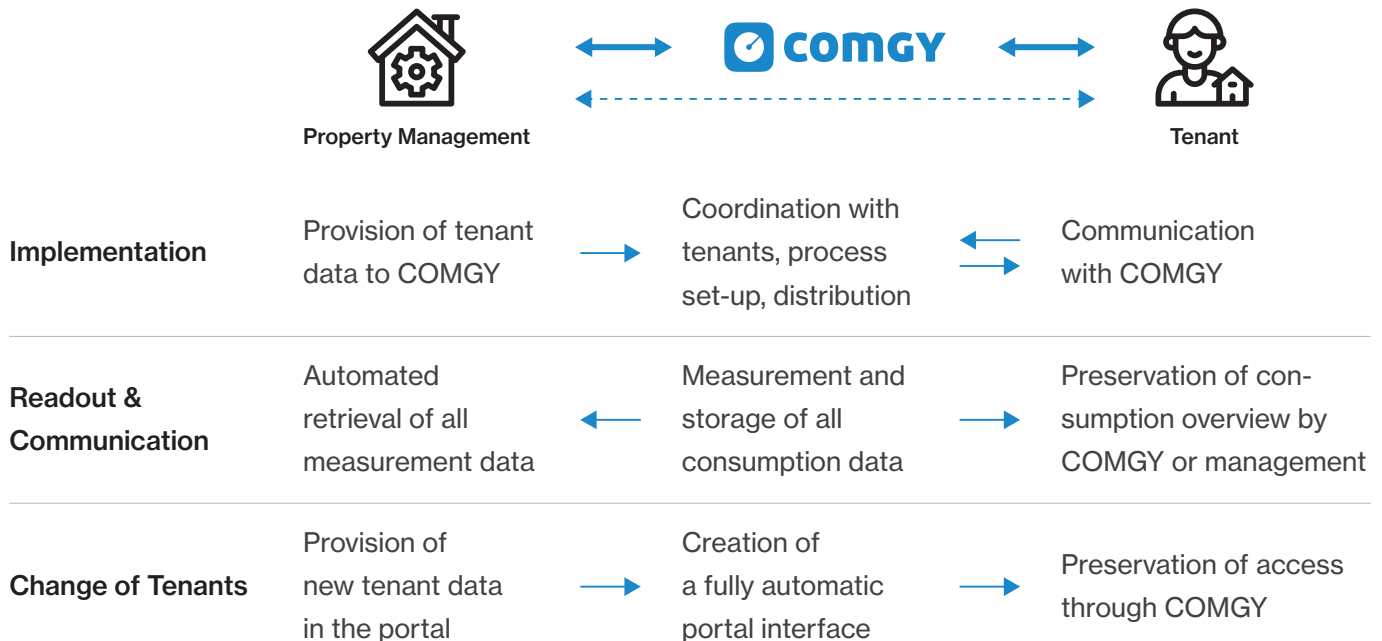

### Data Preparation & Tenant Communication

The professional implementation of monthly reporting obligations requires new interfaces for readout, data processing, data preparation, data storage in compliance with data privacy and efficient tenant communication.

# That's Why Comgy Is The Right EED Partner For You

Customised EED Solutions | Your Needs In Our Focus

## We Design Your Process Together

### Flexible contract design:

We advise, you decide on a modular basis. We take care of the implementation for you.

## Your Benefits

### Monthly Consumption Information

You guarantee your tenants a monthly - if desired daily - consumption overview.

### Interoperable

Through Open Metering Systems (OMS), your property meets the EED requirements for interoperability.

### Data Security

For maximum security, all data logs are individually encrypted.

### Consulting and Execution

We advise you in the project planning and accompany you throughout the entire project.

## We support you in the entire EED process!
